WASTEMASTER ON-SITE FOOD WASTE RECYCLING TO BE SHOWN AT EXPO 2020

Green Eco Technologies will be attending EXPO 2020 Dubai with its innovative WasteMaster food waste conversion system, as an official provider, in the Australian Pavilion.

Rescheduled to run from 1 October 2021 until 31 March 2022 and with more than 190 participating countries, the Expo will welcome a very large global audience with the common purpose to learn more about the latest innovation available to support a strong and sustainable future for the planet.

The WasteMaster system converts organic waste into a reusable resource on site, without using additives or water, reducing its weight by up to 80% and preventing the greenhouse gas emissions otherwise caused by disposing of organic waste in landfill. As a demonstration of the system's efficiency and virtually odour-free residual material remaining at the end of the conversion process, the WasteMaster will recycle all the Pavilion's kitchen and table waste for the duration of the EXPO.

Her Excellency Reem Al Hashimy, UAE Minister of State for International Cooperation, Director General of Expo 2020 Dubai Bureau, said: "Our leadership has spared no effort, guided us, and provided all resources to ensure that our World Expo will be a true expression of the UAE's values, reflecting its ambition to build a better future for us, the region and the world – a future of which coming generations will be proud.

"Our World Expo has a mission to inspire hope, and in the coming weeks we will begin to share new details and ideas about space, health and wellness, travel and connectivity and other subjects that sit at the heart of this Expo. We hope that people will join us to achieve our objectives to bring the world together and put humanity and the planet on the right path towards dignity for all."

Commenting on the eagerly anticipated event, Jason Hoen, Global Sales and Marketing Director for Green Eco Technologies, said: "It is a great privilege and honour for us to be showing our innovative WasteMaster system in the Australian Pavilion at such an important and prestigious event. We are very grateful to the Australian Pavilion and are thoroughly looking forward to demonstrating the sustainability benefits of converting and re-purposing organic waste to retain its value as a further resource in support of a circular economy."
